

Advanced Approach to the Differential Diagnosis of Atypical Dementias

David F. Tang-Wai MDCM FRCPC

Associate Professor (Neurology & Geriatric Medicine)
University of Toronto
Co-Director UHN Memory Clinic

2016 Update in Geriatric Psychiatry, Canadian Association of Geriatric Psychiatry
Thursday September 29, 2016 - Quebec City QC

Presenter Disclosure Form

- **Faculty:** David F. Tang-Wai MDCM FRCPC
- **Relationships with commercial interests:**
 - Member of the Program & Services Committee of the Alzheimer Society of Toronto (no financial compensation)
 - Co-applicant on grants awarded from CIHR, Brain Canada, Weston Foundation and NIH (no salary support)
 - Involved in drug studies from Boehringer, Biogen, Eli-Lili, Lundbeck

Disclosure of Commercial Support

- This program has received no financial support from outside organizations.
- This program has received no in-kind support from outside organizations.

Mitigating Potential Sources of Bias

- There is no potential bias as none of the research projects are involved with diagnosing atypical dementias
- Generic medications for treatment and management will be discussed

Objective

To provide an approach to diagnose uncommon causes of dementia

Outline

1. Pre-talk quiz
2. Approach to atypical dementias, including the rapidly progressive dementias
3. Interactive review of the approach and “common” causes of atypical dementias through cases
4. Post-talk quiz
5. Summary
